Cell Pathway	extracellular space,intermediate filament,extracellular exosome,
Tissue Specificity	Early expression in the hair follicle, mainly found in supramatrical cells and lowermost cortical cells of the hair bulb.
Function	miscellaneous:There are two types of hair/microfibrillar keratin, I (acidic) and II (neutral to basic).,similarity:Belongs to the intermediate filament family.,tissue specificity:Early expression in the hair follicle, mainly found in supramatrical cells and lowermost cortical cells of the hair bulb.,
Background	The protein encoded by this gene is a member of the keratin gene family. This type I hair keratin is an acidic protein which heterodimerizes with type II keratins to form hair and nails. The type I hair keratins are clustered in a region of chromosome 17q12-q21 and have the same direction of transcription. [provided by RefSeq, Jul 2008],
