<b>Function</b>	function: Binds to folate and reduced folic acid derivatives and mediates delivery of 5-methyltetrahydrofolate to the interior of cells. Isoform Short does not bind folate.,PTM: Eight disulfide bonds are present.,similarity: Belongs to the folate receptor family.,tissue specificity: Spleen, thymus, bone marrow, ovarian carcinoma, and uterine carcinoma.,
<b>Background</b>	This gene encodes a member of the folate receptor (FOLR) family of proteins, which have a high affinity for folic acid and for several reduced folic acid derivatives, and mediate delivery of 5-methyltetrahydrofolate to the interior of cells. Expression of this gene may be elevated in ovarian and primary peritoneal carcinoma. This gene is present in a gene cluster on chromosome 11. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Dec 2015],
