Function	function:In muscle, the calcium-binding protein parvalbumin is thought to be involved in muscle relaxation.,mass spectrometry: PubMed:10036163,miscellaneous:This protein binds two calcium ions.,similarity:Belongs to the parvalbumin family.,similarity:Contains 2 EF-hand domains.,
Background	The protein encoded by this gene is a high affinity calcium ion-binding protein that is structurally and functionally similar to calmodulin and troponin C. The encoded protein is thought to be involved in muscle relaxation. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2015],
