

NOD1 rabbit pAb

Catalog No	YP-Ab-08109
Isotype	IgG
Reactivity	Human; Mouse
Applications	WB
Gene Name	NOD1 CARD4
Protein Name	NOD1
Immunogen	Synthesized peptide derived from human NOD1 AA range: 290-340
Specificity	This antibody detects endogenous levels of NOD1 at Human/Mouse
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.224% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen.
Dilution	WB 1:500-2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Nucleotide-binding oligomerization domain-containing protein 1 (Caspase recruitment domain-containing protein 4)
Observed Band	
Observed Band	105kD
Cell Pathway	105kD Cytoplasm. Cell membrane . Apical cell membrane. Basolateral cell membrane. Detected in the cytoplasm and at the cell membrane. Following bacterial infection,
	105kD Cytoplasm. Cell membrane . Apical cell membrane. Basolateral cell membrane. Detected in the cytoplasm and at the cell membrane. Following bacterial infection, localizes to bacterial entry sites in the cell membrane. Recruited to the basolateral
Cell Pathway	Cytoplasm. Cell membrane . Apical cell membrane. Basolateral cell membrane. Detected in the cytoplasm and at the cell membrane. Following bacterial infection localizes to bacterial entry sites in the cell membrane. Recruited to the basolateral and apical membranes in polarized epithelial cells. Highly expressed in adult heart, skeletal muscle, pancreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon. function:Enhances caspase-9-mediated apoptosis. Induces NF-kappa-B activity via RIPK2 and IKK-gamma. Confers responsiveness to intracellular bacterial lipopolysaccharides (LPS).,similarity:Contains 1 CARD domain.,similarity:Contains 1 NACHT domain.,similarity:Contains 9 LRR
Cell Pathway Tissue Specificity	Cytoplasm. Cell membrane . Apical cell membrane. Basolateral cell membrane. Detected in the cytoplasm and at the cell membrane. Following bacterial infection, localizes to bacterial entry sites in the cell membrane. Recruited to the basolateral and apical membranes in polarized epithelial cells. Highly expressed in adult heart, skeletal muscle, pancreas, spleen and ovary. Also detected in placenta, lung, liver, kidney, thymus, testis, small intestine and colon. function:Enhances caspase-9-mediated apoptosis. Induces NF-kappa-B activity via RIPK2 and IKK-gamma. Confers responsiveness to intracellular bacterial lipopolysaccharides (LPS).,similarity:Contains 1 CARD domain.,similarity:Contains 1 NACHT domain.,similarity:Contains 9 LRR (leucine-rich) repeats.,subunit:Self-associates. Binds to caspase-9 and RIPK2 by CARD-CARD interaction.,tissue specificity:Highly expressed in adult heart, skeletal muscle, pancreas, spleen and ovary. Also detected in placenta, lung,

domain (NBD), and 10 tandem leucine-rich repeats (LRRs) in its C terminus. The CARD is involved in apoptotic signaling, LRRs participate in protein-protein interactions, and mutations in the NBD may affect the process of oligomerization and subsequent function of the LRR domain. This protein is an intracellular pattern-protein receptor (PRR) that initiates inflammation in respected to a subset of bootstip through the detection of bootstip of bootstip of the storied displacement. subset of bacteria through the detection of bacterial diaminopimelic acid. Multiple alternatively spliced transcript variants differring in the 5' UTR have been described, but the full-length nature of these variants has not been determined. [provided by RefSeq, Oct 2009],
