

ATS3 rabbit pAb

per subunit.,domain:The spacer domain and the TSP type-1 domains are important for a tight interaction with the extracellular matrix.,function:Cleaves the propeptides of type II collagen prior to fibril assembly. Does not act on types I an III collagens.,PTM:The precursor is cleaved by a furin endopeptidase.,similarity:Contains 1 disintegrin domain.,similarity:Contains 1 peptidase M12B domain.,similarity:Contains 1 PLAC domain.,similarity:Contains 4 TSP type-1 domains.,tissue specificity:Found in cartilage and skin., Background This gene encodes a member of the ADAMTS (a disintegrin and metalloproteinase with thrombospondin motifs) protein family. Members of the family share several distinct protein modules, including a propeptide region, a metalloproteinase domain, a disintegrin-like domain, and a thrombospondin type (TS) motif. Individual members of this family differ in the number of C-terminal TS		
Reactivity Human;Rat;Mouse; Applications WB Gene Name ADAMTS3 KIAA0366 Protein Name ATS3 Immunogen Synthesized peptide derived from human ATS3 AA range: 600-650 Specificity This antibody detects endogenous levels of ATS3 at Human Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen. Dilution WB 1: 500-2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band Cell Pathway Secreted . Secreted, extracellular space, extracellular matrix . Tissue Specificity Found in cartilage and skin. Function caution:Has sometimes been referred to as ADAMTS4, cofactor:Binds 1 zinc ion per subunit, domain:The spacer domain and the TSP type-1 domains are important for a light interaction with the extracellular matrix, inclion:Cleaves the propeptides of type II collagen prior to fibril assembly. Does not on types I an III collagens, Prim. The precursor is cleaved by a furin endopeptidase. similarity:Contains 1 disintegrin domain, similarity:Contains 1 peptidase M12B domain, similarity:Contains 1 disintegrin and metalloproteinase with thrombospondin motifs) protein family, Members of the family share several distinct protein modules, including a propeptide region, a metalloproteinase with unique C-terminal Ts motifs, and some have unique C-terminal Tomotifs, and some have unique C-terminal Tomotifs, and some have unique C-terminal Ts motifs, and some have uniq	Catalog No	YP-Ab-09044
