| <b>Cell Pathway</b>       | Golgi apparatus, trans-Golgi network membrane ; Single-pass type IV membrane protein . Associated with trans Golgi network (TGN) and newly formed immature secretory granules (ISG). Not found on the mature secretory organelles.                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Tissue Specificity</b> | B-cell, Bone marrow, Epithelium, Liver, Urinary bladder,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Function</b>           | function: Involved in the pathway that functions to remove an inhibitor (probably synaptotagmin-4) of calcium-triggered exocytosis during the maturation of secretory granules. May be a marker for this sorting pathway that is critical for remodeling the secretory response of granule. similarity: Belongs to the synaptobrevin family. similarity: Contains 1 v-SNARE coiled-coil homology domain. subcellular location: Associated with trans Golgi network (TGN) and newly formed immature secretory granules (ISG). Not found on the mature secretory organelles. subunit: Identified in a complex containing STX6, STX13, VAMP4 and VT11A. |
| <b>Background</b>         | Synaptobrevins/VAMPs, syntaxins, and the 25-kD synaptosomal-associated protein SNAP25 are the main components of a protein complex involved in the docking and/or fusion of synaptic vesicles with the presynaptic membrane. The protein encoded by this gene is a member of the vesicle-associated membrane protein (VAMP)/synaptobrevin family. This protein may play a role in trans-Golgi                                                                                                                                                                                                                                                        |

network-to-endosome transport. [provided by RefSeq, Jul 2008],

**matters needing attention**

Avoid repeated freezing and thawing!

**Usage suggestions**

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
