

CD236 Polyclonal Antibody

Catalog No	YP-Ab-10683
Isotype	IgG
Reactivity	Human;Rat;Mouse;
Applications	IHC;IF;ELISA
Gene Name	GYPC GLPC GPC
Protein Name	Glycophorin-C (Glycoconnectin) (Glycophorin-D) (GPD) (Glycoprotein beta) (PAS-2') (Sialoglycoprotein D) (CD antigen CD236)
Immunogen	Synthetic peptide from human protein at AA range: 11-60
Specificity	The antibody detects endogenous CD236
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	IHC-p 1:50-200, ELISA 1:10000-20000. IF 1:50-200
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Glycophorin-C (Glycoconnectin;Glycophorin-D;GPD;Glycoprotein beta;PAS-2';Sialoglycoprotein D;CD antigen CD236)
Observed Band	
Cell Pathway	Cell membrane; Single-pass type III membrane protein. Linked to the membrane via band 4.1.
Tissue Specificity	Glycophorin-C is expressed in erythrocytes. Glycophorin-D and IsoGPC are ubiquitously expressed.
Function	function:This protein is a minor sialoglycoprotein in human erythrocyte membranes. The blood group Gerbich antigens and receptors for Plasmodium falciparum merozoites are most likely located within the extracellular domain. Glycophorin C plays an important role in regulating the stability of red cells.,online information:Blood group antigen gene mutation database,online information:Glycophorin C entry,polymorphism:GYPC is responsible for the Gerbich blood group system.,subcellular location:Linked to the membrane via Band 4.1.,tissue specificity:Glycophorin C is expressed in erythrocytes. Glycophorin D is ubiquitous.,
Background	Glycophorin C (GYPC) is an integral membrane glycoprotein. It is a minor species carried by human erythrocytes, but plays an important role in regulating the mechanical stability of red cells. A number of glycophorin C mutations have been described. The Gerbich and Yus phenotypes are due to deletion of exon 3 and 2, respectively. The Webb and Duch antigens, also known as glycophorin D,

result from single point mutations of the glycophorin C gene. The glycophorin C protein has very little homology with glycophorins A and B. Alternate splicing results in multiple transcript variants. [provided by RefSeq, Feb 2012],

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
