<b>Function</b>	function: Component of the eukaryotic translation initiation factor 3 (eIF-3) complex, which is required for several steps in the initiation of protein synthesis. The eIF-3 complex associates with the 40S ribosome and facilitates the recruitment of eIF-1, eIF-1A, eIF-2:GTP:methionyl-tRNA <sub>i</sub> and eIF-5 to form the 43S preinitiation complex (43S PIC). The eIF-3 complex stimulates mRNA recruitment to the 43S PIC and scanning of the mRNA for AUG recognition. The eIF-3 complex is also required for disassembly and recycling of posttermination ribosomal complexes and subsequently prevents premature joining of the 40S and 60S ribosomal subunits prior to initiation., mass spectrometry: PubMed:17322308, mass spectrometry: PubMed:18599441, PTM: Phosphorylated by TGF-beta type II receptor., similarity: Belongs to the eIF-3 subunit I family., similarity: Contains 5 WD repeats., subunit: Component of the eukaryotic
