Cell Pathway	[Isoform 1]: Cytoplasm. Nucleus.; [Isoform 2]: Nucleus, PML body.
Tissue Specificity	Widely expressed. Expressed in pancreas, kidney, muscle, liver, lung, placenta, brain, heart, leukocytes, colon, intestine, ovary, testis, prostate, thymus and spleen.
Function	function: Mediates the import of RPA complex into the nucleus, possibly via some interaction with importin beta. Isoform 2 is sumoylated and mediates the localization of RPA complex into the PML body of the nucleus, thereby participating in RPA function in DNA metabolism. PTM: Isoform 2 is sumoylated. Sumoylation is required for localization in the nuclear PML body and transport of RPA complex in PML body. Upon UV irradiation and during S phase, it is desumoylated, releasing RPA complex that is translocated to sites of DNA damage. Sumoylation takes place at different Lys residues. similarity: Contains 1 RIP-type zinc finger. subcellular location: Only nuclear, localizes to PML body. subunit: Interacts with the RPA1 subunit of RPA complex. tissue specificity: Widely expressed. Expressed in pancreas, kidney, muscle, liver, lung, placenta, brain, heart, leukocytes, colon, intestine, ovary, testis
