| <b>Function</b>           | function:GRF is released by the hypothalamus and acts on the adenohipophyse to stimulate the secretion of growth hormone.,online information:Growth hormone releasing hormone entry,pharmaceutical:Available under the names Groliberin (Pharmacia) or Somatrel (Ferring). Also available under the name Geref (Serono). Geref is a synthetic acetylated form of residues 1 to 29 of GHRH. Used for the treatment of growth hormone deficiency.,similarity:Belongs to the glucagon family.,                                                                                                                                                    |
| <b>Background</b>         | This gene encodes a member of the glucagon family of proteins. The encoded preproprotein is produced in the hypothalamus and cleaved to generate the mature factor, known as somatoliberin, which acts to stimulate growth hormone release from the pituitary gland. Variant receptors for somatoliberin have been found in several types of tumors, and antagonists of these receptors can inhibit the growth of the tumors. Defects in this gene are a cause of dwarfism, while hypersecretion of the encoded protein is a cause of gigantism. Alternative splicing results in multiple transcript variants, at least one of which encodes a |

preproprotein that is proteolytically processed. [provided by RefSeq, Jan 2016],

**matters needing attention**

Avoid repeated freezing and thawing!

**Usage suggestions**

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
