

## Cyclin B1 Monoclonal Antibody

Catalog No         YP-mAb-16722           Isotype         IgG           Reactivity         Human;Mouse;Rat           Applications         W/B           Gene Name         CCNB1           Protein Name         G2/mitotic-specific cyclin-B1           Immunogen         The antiserum was produced against synthesized peptide derived from human Cyclin B1. AA range:91-140           Specificity         Cyclin B1 Monoclonal Antibody detects endogenous levels of Cyclin B1 protein.           Formulation         Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.           Source         Monoclonal, Mouse, IgG           Purification         The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.           Dilution         W/B 1:500-1:2000           Concentration         1 mg/ml           Purity         ≥90%           Storage Stability         -20°C/1 year           Synonyms         CCNB1; CCNB; G2/mitotic-specific cyclin-B1           Observed Band         60kD           Cell Pathway         Cytoplasm. Nucleus. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome.           Tissue Specificity         Breast adenocarcinoma, Lung, Placenta,           Function         developmental stage-Accumulates steadily during G2 and is abruptly destroyed at milos		
Reactivity Human; Mouse; Rat  Applications WB  Gene Name CCNB1  Protein Name G2/mitotic-specific cyclin-B1  Immunogen The antiserum was produced against synthesized peptide derived from human Cyclin B1. AA range: 91-140  Specificity Cyclin B1 Monoclonal Antibody detects endogenous levels of Cyclin B1 protein.  Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.  Source Monoclonal, Mouse, IgG  Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.  Dilution WB 1:500-1:2000  Concentration 1 mg/ml  Purity ≥90%  Storage Stability -20°C/1 year  Synonyms CCNB1; CCNB; G2/mitotic-specific cyclin-B1  Observed Band 60kD  Cell Pathway Cytoplasm. Nucleus. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome.  Tissue Specificity Breast adenocarcinoma, Lung, Placenta,  developmental stage: Accumulates steadily during G2 and is abruptly destroyed at mitosis, function: Essential for the control of the cell cycle at the G2/M (mitosis) transition. PfM: Ubiquitinated by the SCF(NIPA) complex during interphase, leading to its destruction. Not ubiquitinated during G2/M phases, similarity, Belongs to the cyclin family, subunit. Interacts with the CDC2 protein kinase to long-infamily, subunit interacts with the CDC2 protein kinase to form a serine-inferhenomic kinase holoenzyme complex also known as maturation promoting factor (MPF). The cyclin subunit imparts substrate specificity to the complex during interphase.  The protein encoded by this gene is a regulatory protein involved in mitosis. The gene product complexes with p34(cdc2) to form the maturation-promoting factor (MPF). The dependence of the protein involved in mitosis. The gene product complexes with p34(cdc2) to form the maturation-promoting factor (MPF). Two alternative transcripts have been found, a constitutively expressed	Catalog No	YP-mAb-16722
Applications  WB  Gene Name  CCNB1  Protein Name  G2/mitotic-specific cyclin-B1  Immunogen  The antiserum was produced against synthesized peptide derived from human Cyclin B1. AA range:91-140  Specificity  Cyclin B1 Monoclonal Antibody detects endogenous levels of Cyclin B1 protein.  Formulation  Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.  Source  Monoclonal, Mouse, IgG  Purification  The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.  Dilution  WB 1:500-1:2000  Concentration  1 mg/ml  Purity  290%  Storage Stability  -20°C/1 year  Synonyms  CCNB1; CCNB; G2/mitotic-specific cyclin-B1  Observed Band  60kD  Cell Pathway  Cytoplasm. Nucleus. Cytoplasm, cytoskeleton, microtubule organizing center, centrosome.  Tissue Specificity  Breast adenocarcinoma,Lung,Placenta,  developmental stage:Accumulates steadily during G2 and is abruptly destroyed at mitosis, function: Essential for the control of the cell cycle at the G2/M (mitosis) transition. PTM: Ubiquitinated by the SCP(NIPA) complex during interpriase, leading to its destruction. Not ubiquitinated during G2/M phases, similarly. Belongs to the cyclin family, subunit. Interacts with the CDC2 protein kinase to long-manual complex. Binds Hel 10. Interacts with catalytically active RALBP1 and CDC2 during mitosis to from an enfocytotic complex during interpriase.  The protein encoded by this gene is a regulatory protein involved in mitosis. The gene product complexes with p34(cdc2) to form the maturation-promoting factor (MPF). The explin subunit imparts substantion-promoting factor (MPF). The vecin subunit imp	Isotype	IgG
