

MK Monoclonal Antibody

Catalog No YP-mAb-15998 Isotype IgG Reactivity Human;Rat Applications WB Gene Name MDK Protein Name Midkine Immunogen The antiserum was produced against synthesized peptide derived from the Internal region of human MDK. AA range:94-143 Specificity MK Monoclonal Antibody detects endogenous levels of MK protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms MDK; MK1; NEGF2; Midkine; MK; Amphiregulin-associated protein; ARAP; Midgestation and kidney protein; Neurite outgrowth-promoting factor 2; Neurite outgrowth-promoting protein Observed Band 18kD Cell Pathway Secreted. Tissue Specificity Expressed in various tumor cell lines. In insulinoma tissue predominantly expressed in precancerous lesions. Function		
Reactivity Human;Rat Applications WB Gene Name MDK Protein Name Midkine Immunogen The antiserum was produced against synthesized peptide derived from the Internal region of human MDK. AA range:94-143 Specificity MK Monoclonal Antibody detects endogenous levels of MK protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms MDK; MK1; NEGF2; Midkine; MK; Amphiregulin-associated protein; ARAP; Midgestation and kidney protein; Neurite outgrowth-promoting factor 2; Neurite outgrowth-promoting protein Observed Band 18kD Cell Pathway Secreted. Tissue Specificity Expressed in various tumor cell lines. In insulinoma tissue predominantly expressed in precancerous lesions. Function function:Has heparin binding activity, and growth promoting activity. Involved in neointima formation after arterial injury, possibly by medicating leukocyte recruitment. Also involved in early fetal adrenal gland development, induction:By heparin and retinion candid, similarity. Belongs to the pleiotrophin family, subunit. Homodimer., Background This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Catalog No	YP-mAb-15998
Applications WB Gene Name MDK Protein Name Midkine Immunogen The antiserum was produced against synthesized peptide derived from the Internal region of human MDK. AA range:94-143 Specificity MK Monoclonal Antibody detects endogenous levels of MK protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity 290% Storage Stability -20°C/1 year Synonyms MDK; MK1; NEGF2; Midkine; MK; Amphiregulin-associated protein; ARAP; Midgestation and kidney protein; Neurite outgrowth-promoting factor 2; Neurite outgrowth-promoting protein Observed Band 18kD Cell Pathway Secreted. Tissue Specificity Expressed in various tumor cell lines. In insulinoma tissue predominantly expressed in precancerous lesions. Function function: Has heparin binding activity, and growth promoting activity, Involved in neolitima formation after arterial injury, possibly by mediating leukocyte recruitment. Also involved in a learly fetal adrenal gland development., induction: By heparin and retinoic acid., similarity. Belongs to the pleiotrophin family. subunit. Homodimer. This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Isotype	IgG

The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Synonyms	Midgestation and kidney protein; Neurite outgrowth-promoting factor 2; Neurite
Tissue Specificity Expressed in various tumor cell lines. In insulinoma tissue predominantly expressed in precancerous lesions. function function:Has heparin binding activity, and growth promoting activity. Involved in neointima formation after arterial injury, possibly by mediating leukocyte recruitment. Also involved in early fetal adrenal gland development.,induction:By heparin and retinoic acid.,similarity:Belongs to the pleiotrophin family.,subunit:Homodimer., This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Observed Band	18kD
Function function:Has heparin binding activity, and growth promoting activity. Involved in neointima formation after arterial injury, possibly by mediating leukocyte recruitment. Also involved in early fetal adrenal gland development.,induction:By heparin and retinoic acid.,similarity:Belongs to the pleiotrophin family.,subunit:Homodimer., This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Cell Pathway	Secreted.
neointima formation after arterial injury, possibly by mediating leukocyte recruitment. Also involved in early fetal adrenal gland development.,induction:By heparin and retinoic acid.,similarity:Belongs to the pleiotrophin family.,subunit:Homodimer., This gene encodes a member of a small family of secreted growth factors that binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Tissue Specificity	
binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.	Function	neointima formation after arterial injury, possibly by mediating leukocyte recruitment. Also involved in early fetal adrenal gland development.,induction:By heparin and retinoic acid.,similarity:Belongs to the pleiotrophin
	Background	binds heparin and responds to retinoic acid. The encoded protein promotes cell growth, migration, and angiogenesis, in particular during tumorigenesis. This gene has been targeted as a therapeutic for a variety of different disorders. Alternatively spliced transcript variants encoding multiple isoforms have been observed.
