RFC1 Polyclonal Antibody

140 kDa subunit; Activator 1 large subunit; Activator 1 subunit 1;DNA-binding protein PO-GA; Replication factor C 140 kDa subunit; RF-C 140 kDa subunit; RFC140; Replication factor C large subunit Observed Band 128kD Cell Pathway Nucleus. Tissue Specificity Wide tissue distribution. Undetectable in placental tissue. Function function:Interacts with C-terminus of PCNA. 5' phosphate residue is required binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a recognition of non-primer template DNA structures during replication and/or repair.,function:The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-transcription element as well as other GA rich DNA sequences. Could play a		
Reactivity Human;Mouse;Rat Applications WB;ELISA;IHC Gene Name RFC1 Protein Name Replication factor C subunit 1 Immunogen Synthesized peptide derived from the Internal region of human RFC1. Specificity RFC1 Polyclonal Antibody detects endogenous levels of RFC1 protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-2000;IHC-p 1:50-300; ELISA 2000-20000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms RFC1; RFC140; Replication factor C subunit 1; Activator 1 140 kDa subunit; 140 kDa subunit; Activator 1 large subunit; Activator 1 subunit 1:DNA-binding protein PO-GA; Replication factor C large subunit (RFC140; Replication factor C large subunit) Observed Band 128kD Cell Pathway Nucleus. Tissue Specificity Wide tissue distribution. Undetectable in placental tissue. Function function:Interacts with C-terminus of PCNA. 5' phosphate residue is required binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a recognition of non-prime template DNA structures during replication and/or repair, function: The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-transcription element as well as other GA rich DNA sequences. Could play a	Catalog No	YP-Ab-16793

This subunit binds to the primer-template junction. Binds the PO-transcription element as well as other GA rich DNA sequences. Could play a	Storage Stability	-20°C/1 year
Tissue Specificity Wide tissue distribution. Undetectable in placental tissue. Function function:Interacts with C-terminus of PCNA. 5' phosphate residue is required binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a recognition of non-primer template DNA structures during replication and/or repair.,function:The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-transcription element as well as other GA rich DNA sequences. Could play a	Synonyms	RFC1; RFC140; Replication factor C subunit 1; Activator 1 140 kDa subunit; A1 140 kDa subunit; Activator 1 large subunit; Activator 1 subunit 1;DNA-binding protein PO-GA; Replication factor C 140 kDa subunit; RF-C 140 kDa subunit; RFC140; Replication factor C large subunit
Tissue Specificity Wide tissue distribution. Undetectable in placental tissue. function: Interacts with C-terminus of PCNA. 5' phosphate residue is required binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a recognition of non-primer template DNA structures during replication and/or repair., function: The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-l transcription element as well as other GA rich DNA sequences. Could play a	Observed Band	128kD
function:Interacts with C-terminus of PCNA. 5' phosphate residue is required binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a recognition of non-primer template DNA structures during replication and/or repair.,function:The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-l transcription element as well as other GA rich DNA sequences. Could play a	Cell Pathway	Nucleus.
binding of the N-terminal DNA-binding domain to duplex DNA, suggesting a rorecognition of non-primer template DNA structures during replication and/or repair.,function:The elongation of primed DNA templates by DNA polymerase delta and epsilon requires the action of the accessory proteins PCNA and activator 1. This subunit binds to the primer-template junction. Binds the PO-transcription element as well as other GA rich DNA sequences. Could play a	Tissue Specificity	Wide tissue distribution. Undetectable in placental tissue.
single- or double-stranded DNA.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATRsimilarity:Belongs to the activator 1 large subunit	Function	activator 1. This subunit binds to the primer-template junction. Binds the PO-B transcription element as well as other GA rich DNA sequences. Could play a role in DNA transcription regulation as well as DNA replication and/or repair. Can bind single- or double-stranded DNA.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,similarity:Belongs to the activator 1 large subunit family.,similarity:Contains 1 BRCT domain.,subunit:Heterotetramer of subunits

Background	This gene encodes the large subunit of replication factor C, a five subunit DNA polymerase accessory protein, which is a DNA-dependent ATPase required for eukaryotic DNA replication and repair. The large subunit acts as an activator of DNA polymerases, binds to the 3' end of primers, and promotes coordinated synthesis of both strands. It may also have a role in telomere stability. Alternatively spliced transcript variants encoding different isoforms have been noted for this gene. [provided by RefSeq, Mar 2011],
matters needing attention	Avoid repeated freezing and thawing!

Usage suggestionsThis product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

Western Blot analysis of mouse liver, mouse kidney cells using RFC1 Polyclonal Antibody. Secondary antibody(catalog#:RS0002) was diluted at 1:20000 cells nucleus extracted by Minute TM Cytoplasmic and Nuclear Fractionation kit (SC-003,Inventbiotech,MN,USA).

Immunohistochemical analysis of paraffin-embedded human Breast cancer. 1, Antibody was diluted at 1:200(4° overnight). 2, Tris-EDTA,pH9.0 was used for antigen retrieval. 3,Secondary antibody was diluted at 1:200(room temperature, 45min).
