功能	Microtubule-associated protein that is involved in the formation of parallel microtubule bundles linked by cross-bridges in the proximal axon. Required for the uniform orientation and maintenance of the parallel microtubule fascicles, which are important for efficient cargo delivery and trafficking in axons. Thereby also required for proper axon specification, the establishment of neuronal polarity and proper neuronal migration.
细胞定位	Cell projection, axon . Cytoplasm, cytoskeleton . Microtubule-associated. Localizes to the proximal part of the axon. .
