

ApoA-IV Monoclonal Antibody

Catalog No	YP-Ab-00598
Isotype	IgG
Reactivity	Human
Applications	WB;ELISA
Gene Name	APOA4
Protein Name	Apolipoprotein A-IV
Immunogen	Purified recombinant fragment of ApoA-IV (aa21-396) expressed in E. Coli.
Specificity	ApoA-IV Monoclonal Antibody detects endogenous levels of ApoA-IV protein.
Formulation	Ascitic fluid containing 0.03% sodium azide, 0.5% BSA, 50% glycerol.
Source	Monoclonal, Mouse
Purification	Affinity purification
Dilution	Western Blot: 1/500 - 1/2000. ELISA: 1/10000. Not yet tested in other applications.
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	APOA4; Apolipoprotein A-IV; Apo-AIV; ApoA-IV; Apolipoprotein A4
Observed Band	
Cell Pathway	Secreted.
Tissue Specificity	Synthesized primarily in the intestine and secreted in plasma.
Function	domain: Nine of the thirteen 22-amino acid tandem repeats (each 22-mer is actually a tandem array of two, A and B, related 11-mers) occurring in this sequence are predicted to be highly alpha-helical, and many of these helices are amphipathic. They may therefore serve as lipid-binding domains with lecithin:cholesterol acyltransferase (LCAT) activating abilities. function: May have a role in chylomicrons and VLDL secretion and catabolism. Required for efficient activation of lipoprotein lipase by ApoC-II; potent activator of LCAT. ApoA-IV is a major component of HDL and chylomicrons. online information: The Singapore human mutation and polymorphism database. polymorphism: Eight alleles have been characterized (APOA-IV*0 to APOA-IV*7). APOA-IV*1 is the major allele (90%), APOA-IV*2 is also common (8%), the others are rare alleles. similarity: Belongs to the apolipoprotein A1/A4/E family. tissue
Background	Apolipoprotein (apo) A-IV gene contains 3 exons separated by two introns. A sequence polymorphism has been identified in the 3' UTR of the third exon. The primary translation product is a 396-residue preprotein which after proteolytic processing is secreted its primary site of synthesis, the intestine, in association

with chylomicron particles. Although its precise function is not known, apo A-IV is a potent activator of lecithin-cholesterol acyltransferase in vitro. [provided by RefSeq, Jul 2008],

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
