ADM Polyclonal Antibody

both am and pamp inhibit aldosterone secretion by direct adrenal actions. In pituitary gland, both peptides at physiologically relevant doses inhibit basal ACTH secretion. Both peptides appear to act in brain and pituitary gland to facilitate the loss of plasma volume, actions which complement their hypotensive effects in blood vessels.,similarity:Belongs to the adrenomedullin family.,tissue specificity:Highest levels found in pheochromocytoma and adrenal medulla. Also found in lung, ventricle and kidney tissues., Background The protein encoded by this gene is a preprohormone which is cleaved to form two biologically active peptides, adrenomedullin and proadrenomedullin N-terminal 20 peptide. Adrenomedullin is a 52 aa peptide with several functions,		
Reactivity Human;Mouse;Rat Applications IHC;IF;ELISA Gene Name ADM Protein Name ADM Immunogen The antiserum was produced against synthesized peptide derived from human ADM. AA range:51-100 Specificity ADM Polyclonal Antibody detects endogenous levels of ADM protein. Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Polyclonal, Rabbit,IgG Purification The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen. Dilution IHC: 1/100 - 1/300. ELISA: 1/40000 IF 1:50-200 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms ADM; AM; ADM Observed Band Cell Pathway Secreted. Tissue Specificity Highest levels found in pheochromocytoma and adrenal medulla. Also found in lung, ventricle and kidney tissues. Function function:AM and PAMP are potent hypotensive and vasodilatator agents. Numerous actions have been reported most related to the physiologic contol of fluid and electrolyte homeostasis. In the kidney, am is diuretic and natriuretic, and both am and pamp inhibit aldosterone secretion by direct adrenal actions. In lung, ventricle and kidney tissues of the kidney and is direct adrenal actions. In Protein and pamp inhibit aldosterone secretion by direct adrenal actions. In Protein and pamp inhibit aldosterone secretion by direct adrenal actions. In Protein encoded by this gene is a preprohormone which is cleaved to form two biologically active peptides, adrenomedullin is a 52 as appetide with several functions, N-terminal 20 peptide. Adrenomedullin is a 52 as peptide with several functions.	Catalog No	YP-Ab-15871
Applications IHC:IF;ELISA Gene Name ADM Protein Name ADM Immunogen The antiserum was produced against synthesized peptide derived from human ADM.
