## GFRα-4 Polyclonal Antibody

GFR-alpha-4; Persephin receptorObserved Band30kDCell Pathway[Isoform GFRalpha4a]: Cell membrane; Lipid-anchor, GPI-anchor.; [Isoform GFRalpha4b]: Cell membrane; Lipid-anchor, GPI-anchor.; [Isoform GFRalpha4c]Tissue SpecificityPredominantly expressed in the adult thyroid gland. Low levels also found in feta adrenal and thyroid glands.Functionalternative products:Additional isoforms seem to exist, function:Receptor for persephin. Mediates the GDNF-induced autophosphorylation and activation of th RET receptor. May be important in C-cell development and, in the postnatal development of the adrenal medulla.,similarity:Belongs to the GDNFR family., tissue specificity:Predominantly expressed in the adult thyroid glands.BackgroundThe protein encoded by this gene is a member of the GDNF receptor for persephin, ar				
Reactivity         Human;Rat;Mouse;           Applications         WB;ELISA           Gene Name         GFRA4           Protein Name         GDNF family receptor alpha-4           Immunogen         The antiserum was produced against synthesized peptide derived from human GFRA4. AA range:141-190           Specificity         GFRα-4 Polyclonal Antibody detects endogenous levels of GFRα-4 protein.           Formulation         Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.           Source         Polyclonal, Rabbit,IgG           Purification         The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.           Dilution         Western Blot: 1/500 - 1/2000. ELISA: 1/10000. Not yet tested in other applications.           Concentration         1 mg/ml           Purity         ≥90%           Storage Stability         -20°C/1 year           Synonyms         GFRA4; GDNF family receptor alpha-4; GDNF receptor alpha-4; GDNFR-alpha- GFR-alpha-4; Persephin receptor           Observed Band         30kD         Predominantly expressed in the adult thyroid gland. Low levels also found in fet adrenal and thyroid glands.           Function         alternative products.Additional isoforms seem to exist, function:Receptor for persephin. Mediates the GDNF-receptor family. The adult byroid glands.           Background         The protein encoded by thi	Catalog No	YP-Ab-12731

This gene is a candidat gene for RET-associated diseases. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by	Cell Pathway	GFRalpha4b]: Cell membrane; Lipid-anchor, GPI-anchor.; [Isoform GFRalpha4c]:		
<ul> <li>persephin. Mediates the GDNF-induced autophosphorylation and activation of th RET receptor. May be important in C-cell development and, in the postnatal development of the adrenal medulla.,similarity:Belongs to the GDNFR family.,tissue specificity:Predominantly expressed in the adult thyroid gland. Low levels also found in fetal adrenal and thyroid glands.,</li> <li>Background</li> <li>The protein encoded by this gene is a member of the GDNF receptor family. It a glycosylphosphatidylinositol(GPI)-linked cell surface receptor for persephin, ar mediates activation of the RET tyrosine kinase receptor. This gene is a candidat gene for RET-associated diseases. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by</li> </ul>	Tissue Specificity	Predominantly expressed in the adult thyroid gland. Low levels also found in fetal adrenal and thyroid glands.		
a glycosylphosphatidylinositol(GPI)-linked cell surface receptor for persephin, ar mediates activation of the RET tyrosine kinase receptor. This gene is a candidat gene for RET-associated diseases. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by	Function	persephin. Mediates the GDNF-induced autophosphorylation and activation of the RET receptor. May be important in C-cell development and, in the postnatal development of the adrenal medulla.,similarity:Belongs to the GDNFR family.,tissue specificity:Predominantly expressed in the adult thyroid gland.
