## Frizzled-7 Polyclonal Antibody

| Catalog No         | YP-Ab-13261   |
|--------------------|---|
| lsotype            | lgG   |
| Reactivity         | Human;Mouse   |
| Applications       | WB;Flow Cyt;IF;ELISA  |
| Gene Name          | FZD7  |
| Protein Name       | Frizzled-7  |
| Immunogen          | The antiserum was produced against synthesized peptide derived from human FZD7. AA range:45-94  |
| Specificity        | Frizzled-7 Polyclonal Antibody detects endogenous levels of Frizzled-7 protein.   |
| Formulation        | Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.   |
| Source             | Polyclonal, Rabbit,IgG  |
| Purification       | The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.   |
| Dilution           | WB 1:500-2000;Flow Cyt 1:50-200;IF/ICC 1:100-500;ELISA 1:5000-20000   |
| Concentration      | 1 mg/ml   |
| Purity             | ≥90%  |
| Storage Stability  | -20°C/1 year  |
| Synonyms           | FZD7; Frizzled-7; Fz-7; hFz7; FzE3  |
| Observed Band      | 64kD  |
| Cell Pathway       | Cell membrane ; Multi-pass membrane protein . Endosome membrane ;<br>Multi-pass membrane protein . Associated to the plasma membrane in the<br>presence of FZD7 and phosphatidylinositol 4,5-bisphosphate (PIP2). Localized in<br>recycling endosomes in other conditions   |
| Tissue Specificity | High expression in adult skeletal muscle and fetal kidney, followed by fetal lung, adult heart, brain, and placenta. Specifically expressed in squamous cell esophageal carcinomas.   |
| Function           | domain:Lys-Thr-X-X-X-Trp motif is involved in the activation of the<br>Wnt/beta-catenin signaling pathway.,domain:The FZ domain is involved in binding<br>with Wnt ligands.,function:Receptor for Wnt proteins. Most of frizzled receptors<br>are coupled to the beta-catenin canonical signaling pathway, which leads to the<br>activation of disheveled proteins, inhibition of GSK-3 kinase, nuclear<br>accumulation of beta-catenin and activation of Wnt target genes. A second<br>signaling pathway involving PKC and calcium fluxes has been seen for some<br>family members, but it is not yet clear if it represents a distinct pathway or if it can<br>be integrated in the canonical pathway, as PKC seems to be required for<br>Wnt-mediated inactivation of GSK-3 kinase. Both pathways seem to involve<br>interactions with G-proteins. May be involved in transduction and intercellular<br>transmission of polarity information during tissue morphog |

| Background                | frizzled class receptor 7(FZD7) Homo sapiens Members of the<br>'frizzled' gene family encode 7-transmembrane domain proteins that<br>are receptors for Wnt signaling proteins. The FZD7 protein contains an<br>N-terminal signal sequence, 10 cysteine residues typical of the cysteine-rich<br>extracellular domain of Fz family members, 7 putative transmembrane domains,<br>and an intracellular C-terminal tail with a PDZ domain-binding motif. FZD7 gene<br>expression may downregulate APC function and enhance beta-catenin-mediated<br>signals in poorly differentiated human esophageal carcinomas. [provided by<br>RefSeq, Jul 2008], |
|---------------------------|---|
| matters needing attention | Avoid repeated freezing and thawing!  |
| Usage suggestions         | This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.   |
