

NXF3 Monoclonal Antibody

Catalog No	YP-mAb-01924
Isotype	IgG
Reactivity	Human;Rat;Mouse;
Applications	WB
Gene Name	NXF3
Protein Name	Nuclear RNA export factor 3
Immunogen	The antiserum was produced against synthesized peptide derived from human NXF3. AA range:72-121
Specificity	NXF3 Monoclonal Antibody detects endogenous levels of NXF3 protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-1:2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	NXF3; TAPL3; Nuclear RNA export factor 3; TAP-like protein 3; TAPL-3
Observed Band	60kD
Cell Pathway	Nucleus. Cytoplasm. Shuttles between the nucleus and the cytoplasm.
Tissue Specificity	Expressed at high level in testis and at low level in a small number of tissues.
Function	domain:Contains a novel CRM1-dependent nuclear export signal that compensates in cis for the loss of the nuclear pore targeting domain.,domain:Lacks C-terminal domain that mediates direct interactions with nucleoporins.,function:May function as a tissue-specific nuclear mRNA export factor.,miscellaneous:The RNA-binding domain is a non-canonical RNP-type domain.,similarity:Belongs to the NXF family.,similarity:Contains 1 LRR (leucine-rich) repeat.,similarity:Contains 1 NTF2 domain.,similarity:Contains 1 RRM (RNA recognition motif) domain.,subcellular location:Shuttles between the nucleus and the cytoplasm.,subunit:Interacts with NXT1, NXT2, E1B-AP5 and CRM1 nuclear export factor.,tissue specificity:Expressed at high level in testis and at low level in a small number of tissues.,
Background	This gene is one member of a family of nuclear RNA export factor genes. Common domain features of this family are a noncanonical RNP-type RNA-binding domain (RBD), 4 leucine-rich repeats (LRRs), a nuclear transport

factor 2 (NTF2)-like domain that allows heterodimerization with NTF2-related export protein-1 (NXT1), and a ubiquitin-associated domain that mediates interactions with nucleoporins. The LRRs and NTF2-like domains are required for export activity. Alternative splicing seems to be a common mechanism in this gene family. The encoded protein of this gene has shortened LRR and ubiquitin-associated domains and its RDB is unable to bind RNA. It is located in the nucleoplasm but is not associated with either the nuclear envelope or the nucleolus. [provided by RefSeq, Jul 2008],
