

POPD1 Monoclonal Antibody

(Popeye protein 1) Immunogen Synthesized peptide derived from part region of human protein Specificity POPD1 Monoclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band 39kD Cell Pathway Lateral cell membrane and the cell-cell contact in cardiac and skeletal muscle (By similarity). Its movement from the cytoplasm to membrane is an early event occurring concurrently with cell-cell contact. Colocalizes in epithelial cells with OCLN and TJP1 in an apical-lateral position within the z axis. Detected at cell-cell contact in cardiac and skeletal muscle. Function function: May play an important role in heart development, similarity: Belongs to the popeye familly, itssue specificity: Expressed in fetal and adult heart and skeletal muscle.		
Reactivity Human; Mouse; Rat Applications WB Gene Name BVES POP1 POPDC1 Protein Name Blood vessel epicardial substance (hBVES) (Popeye domain-containing protein 1) Immunogen Synthesized peptide derived from part region of human protein Specificity POPD1 Monoclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band 39kD Cell Pathway Lateral cell membrane. Cell junction, tight junction. Membrane; Multi-pass membrane protein. All all the cell-cell contact in cardiac and selected muscle (By similarity). Its movement from the cell polasm to membrane is an early event occurring concurrently with cell-cell contact. Colocalizes in epithelial cells with OCLN and TuP1 in an apical-lateral position within the z axis. Detected at cell-cell contact to recordinate the state of epithelial cells with OCLN and TuP1 in an apical-lateral position within the z axis. Detected at cell-cell contact of cardiac and skeletal muscle. Function function: May play an important role in heart development, similarity. Belongs to the popeye family, tissue specificity-Expressed in fetal and adult heart and skeletal muscle. Background blood vessel epicardial substance(BVES) Homo sapiens This gene encodes a member of the POP family of proteins containing three putative transmembrane domains. This gene is expressed in cardiac and skeletal muscle and may a de an important role in development of these customer and a might be involved in the regeneration of adult skeletal muscle and may a de as a cell	Catalog No	YP-mAb-05382
Applications WB Gene Name BVES POP1 POPDC1 Protein Name Blood vessel epicardial substance (hBVES) (Popeye domain-containing protein 1) Immunogen Synthesized peptide derived from part region of human protein Specificity POPD1 Monoclonal Antibody detects endogenous levels of protein. Formulation Liquid in PBS containing 50% glycerol, and 0.02% sodium azide. Source Monoclonal, Mouse, IgG Purtification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band 39kD Cell Pathway Lateral cell membrane . Cell junction, tight junction . Membrane ; Multi-pass membrane protein . Cell membrane, sarcolemma . Membrane ; aveola coloralizes with VAMP3 at the cell-cell contact in cardiac and skeletal muscle (By similarity). Its movement from the cytoplasm to membrane is an early event occurring concurrently with cell-cell contact in cardiac and skeletal muscle (By similarity). Its movement from the cytoplasm to membrane is an early event countries of contact but never observed at the free surface of epithelial cells with OCLN and TuP1 in an apical-lateral position within the z axis. Detected at cell-cell contact to rearrance and skeletal muscle. Function function:May play an important role in heart development, similarity. Belongs to the popeye family, tissue specificity:Expressed in fetal and adult heart and skeletal muscle. Background blood vessel epicardial substance(BVES) Homo sapiens This gene encodes a member of the POP family of proteins containing three putative transmembrane domains. This gene is expressed in cardiac and skeletal muscle and may also an important role in development of these tissues. The mouse ortholog may be an important role in development of these cardiac and skeletal muscle and may act as a cell	Isotype	IgG
