May act as a tumor suppressor.,similarity:Belongs to the small GTPase superfamily. Arf family.,tissue specificity:Expressed in lung and leukocytes.,
<b>Background</b>	This gene encodes a tumor suppressor related to the ADP-ribosylation factor (ARF) family of proteins. The encoded protein may play a role in apoptosis in a caspase-dependent manner. Polymorphisms in this gene have been associated with some familial cancers. [provided by RefSeq, May 2010],
