Cell Pathway	nucleus,nucleolus,cytoplasm,extracellular exosome,
Tissue Specificity	Expressed at higher levels in tumor tissues such as carcinoma.
Function	function:May play a role in the transformation process due to its capacity to confer resistance to the growth-inhibitory effects of TGF-beta1 through interaction with retinoblastoma and the subsequent displacement of E2F-1.,similarity:Belongs to the RBBP9 family.,tissue specificity:Widely expressed. Expressed at higher levels in tumor tissues than in normal tissues.,
Background	The protein encoded by this gene is a retinoblastoma binding protein that may play a role in the regulation of cell proliferation and differentiation. Two alternatively spliced transcript variants of this gene with identical predicted protein products have been reported, one of which is a nonsense-mediated decay candidate.
