Tissue Specificity	
Function	function:Regulatory subunit of the condensin-2 complex, a complex that seems to provide chromosomes with an additional level of organization and rigidity and in establishing mitotic chromosome architecture. May play a role in lineage-specific role in T-cell development.,PTM:Phosphorylated upon DNA damage, probably by ATM or ATR.,similarity:Belongs to the CND2 H2 (condensin-2 subunit 2) family.,subcellular location:Distributed along the arms of chromosomes assembled in vivo and in vitro.,subunit:Component of the condensin-2 complex, which contains the smc2 and smc4 heterodimer, and three non SMC subunits, ncpg2, ncaph2 and ncaph3 that probably regulate the complex.,
Background	This gene encodes one of the non-SMC subunits of the condensin II complex. This complex plays an essential role in mitotic chromosome assembly. Alternate splicing of this gene results in multiple transcript variants.[provided by RefSeq, May 2010],
