Function	function:Regulates exocytosis in mast cells. Increases both the extent of secretion and the sensitivity of mast cells to stimulation with calcium.,miscellaneous:'Secern' is an archaic English term meaning 'secrete'.,similarity:Belongs to the peptidase C69 family. Secernin subfamily.,
Background	This gene likely encodes a member of the secernin family of proteins. A similar protein in rat functions in regulation of exocytosis in mast cells. Alternatively spliced transcript variants have been described. [provided by RefSeq, Mar 2009],
