

DCK mouse mAb

Catalog No YP-mAb-11413 Isotype IgG Reactivity Human; Mouse;Rat Applications WB Gene Name DCK Protein Name DCK Immunogen Synthesized peptide derived from human DCK AA range: 62-112 Specificity This antibody detects endogenous levels of DCK at Human/Mouse/Rat Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Cell Pathway Nucleus . Tissue Specificity Tissue Specificity Function Catalytic activity:NTP + deoxycytidine = NDP + dCMP, function:Required for the phosphorylation of the deoxyribon ucleosides deoxycytidine (CC), deoxyguanosine phosphorylation of numerous nucleoside analogs widely employed as antiviral and chermotherapeutic agents. PTM:Phosphorylated upon DNA damage, phosphorylation of numerous nucleoside analogs. Deficiency of DCK is a family, subunit-Homodimers.		
Reactivity Human; Mouse;Rat Applications WB Gene Name DCK Protein Name DCK Immunogen Synthesized peptide derived from human DCK AA range: 62-112 Specificity This antibody detects endogenous levels of DCK at Human/Mouse/Rat Formulation Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide. Source Monoclonal, Mouse,IgG Purification The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen. Dilution WB 1:500-1:2000 Concentration 1 mg/ml Purity ≥90% Storage Stability -20°C/1 year Synonyms Observed Band Cell Pathway Nucleus: Tissue Specificity Function catalytic activity:NTF+ deoxycytidine = NDF+ dCMF, function:Required for the phosphorylation of the deoxyribonucleosides deoxycytidine (dC), deoxyguanosine (dG) and deoxyadenosine (dA). It is also an essential enzyme for the phosphorylation of numerous nucleoside analogs widely employed as antiviral and chemotherapeutic agents., PTM Phosphorylated upon DNA damage, probably by ATM or ATR., similarity:Belongs to the DCK/DGK associated with resistance to antiviral and anticancer chemotherapeutic agents. Background Deoxycytidine kinase (DCK) is required for the phosphorylation of these compounds to cytotoxic nucleoside triphosphate derivatives. DCK is clinically important because of its relationship to drug resistance and	Catalog No	YP-mAb-11413
