function:ICAM proteins are ligands for the leukocyte adhesion protein LFA (integrin alpha-L/beta-2). During leukocyte trans-endothelial migration, ICA engagement promotes the assembly of endothelial apical cups through SG RHOG activation. In case of rhinovirus infection acts as a cellular receptor virus.,online information:ICAM-1,online information:Icosahedral capsid structure,online information:Intercellular adhesion molecule entry,polymorphism:Homozygotes with ICAM1-Kalifi Met-56 seem to have increased risk for cerebral malaria.,PTM:Monoubiquitinated, which is prom MARCH9 and leads to endocytosis.,similarity:Belongs to the immunoglobus superfamily. ICAM family.,similarity:Contains 5 Ig-like C2-type (immunoglobulin-like) domains.,subunit:Homodimer (Probable). Interacts whuman herpesvirus 8 MIR2 protein (Probable). Interacts with MUC1 and procell a	AM1 GEF and for the an anted by ulin

Background	This gene encodes a cell surface glycoprotein which is typically expressed on endothelial cells and cells of the immune system. It binds to integrins of type CD11a / CD18, or CD11b / CD18 and is also exploited by Rhinovirus as a receptor. [provided by RefSeq, Jul 2008],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
