Cell Pathway	Nucleus . Chromosome, centromere, kinetochore . Localizes to kinetochores from late prophase to anaphase. Localizes specifically to the outer plate of the kinetochore. .
Tissue Specificity	
Function	Acts as a component of the essential kinetochore-associated NDC80 complex, which is required for chromosome segregation and spindle checkpoint activity . Required for kinetochore integrity and the organization of stable microtubule binding sites in the outer plate of the kinetochore . The NDC80 complex synergistically enhances the affinity of the SKA1 complex for microtubules and may allow the NDC80 complex to track depolymerizing microtubules .
Background	
matters needing attention	Avoid repeated freezing and thawing!
