

## PARP3 Mouse mAb

Catalog No         YP-mAb-19000           Isotype         IgG           Reactivity         Human,Mouse,Rat           Applications         WB           Gene Name         Frotein Name           Immunogen         Recombinant protein (or fragment). This information is considered to be commercially sensitive.           Specificity         Formulation           Source         Monoclonal, Mouse, IgG           Purification         Affinity purification           Dilution         WB 1:500-2000           Concentration         1 mg/ml           Purity         ≥90%           Storage Stability         -20°C/1 year           Synonyms         IRT1; ARTD3; ADPRT3; ADPRTL2; ADPRTL3; PADPRT-3; PARP3           Observed Band         60kDa           Cell Pathway         Tissue Specificity           Function         The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene necodes the poly(ADP-ribosylloransferaes 3, which is preferentially localized to the daughter centricle throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.		
Reactivity Human,Mouse,Rat  Applications WB  Gene Name  Protein Name  Immunogen Recombinant protein (or fragment).This information is considered to be commercially sensitive.  Specificity  Formulation  Source Monoclonal,Mouse,IgG  Purification Affinity purification  Dilution WB 1:500-2000  Concentration 1 mg/ml  Purity ≥90%  Storage Stability -20°C/1 year  Synonyms IRT1; ARTD3; ADPRT3; ADPRTL2; ADPRTL3; PADPRT-3; PARP3  Observed Band 60kDa  Calculated Molecular Weight  Tissue Specificity  Function  Background The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centrole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.	Catalog No	YP-mAb-19000
Applications  Gene Name Protein Name Immunogen Recombinant protein (or fragment). This information is considered to be commercially sensitive.  Specificity Formulation Source Monoclonal, Mouse, IgG Purification Affinity purification Dilution WB 1:500-2000 Concentration 1 mg/ml Purity 290% Storage Stability -20°C/1 year Synonyms IRT1; ARTD3; ADPRT3; ADPRTL2; ADPRTL3; PADPRT-3; PARP3 Observed Band 60kDa Calculated Molecular Weight Cell Pathway Tissue Specificity Function  Background The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centrole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.	Isotype	IgG

Calculated Molecular Weight Cell Pathway  Tissue Specificity  Function  Background  The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  matters needing  Avoid repeated freezing and thawing!	Storage Stability	-20°C/1 year
Calculated Molecular Weight Cell Pathway  Tissue Specificity  Function  Background  The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  matters needing  Avoid repeated freezing and thawing!	Synonyms	IRT1; ARTD3; ADPRT3; ADPRTL2; ADPRTL3; PADPRT-3; PARP3
Tissue Specificity  Function  Background  The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  matters needing  Avoid repeated freezing and thawing!	Observed Band	60kDa
Function  Background The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  matters needing Avoid repeated freezing and thawing!	Weight	60kDa
Background  The protein encoded by this gene belongs to the PARP family. These enzymes modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  matters needing  Avoid repeated freezing and thawing!	Tissue Specificity	
modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript variants encoding different isoforms have been identified.  Matters needing Avoid repeated freezing and thawing!	Function	
	Background	modify nuclear proteins by poly-ADP-ribosylation, which is required for DNA repair, regulation of apoptosis, and maintenance of genomic stability. This gene encodes the poly(ADP-ribosyl)transferase 3, which is preferentially localized to the daughter centriole throughout the cell cycle. Alternatively spliced transcript
	matters needing attention	Avoid repeated freezing and thawing!

## UpingBio technology Co.,Ltd

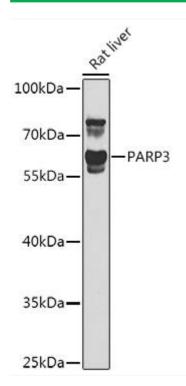

**Usage suggestions** 

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

Western blot analysis of lysates from Rat liver, using PARP3 Mouse mAb (A7297) at 1:1000 dilution. Secondary antibody: HRP-conjugated Goat anti-Mouse IgG (H+L) (AS014) at 1:10000 dilution. Lysates/proteins: 25µ g per lane. Blocking buffer: 3% nonfat dry milk in TBST. Detection: ECL Basic Kit. Exposure time: 90s
