Tissue Specificity	
Function	Lipid-modulating phosphodiesterase . Active on the surface of macrophages and dendritic cells and strongly influences macrophage lipid composition and membrane fluidity. Acts as a negative regulator of Toll-like receptor signaling (By similarity) . Has in vitro phosphodiesterase activity , but the physiological substrate is unknown . Lacks activity with phosphocholine-containing lipids , but can cleave CDP-choline , and can release phosphate from ATP and ADP (in vitro) (By similarity) .
Background	
matters needing attention	Avoid repeated freezing and thawing!
