| <b>Tissue Specificity</b>          | Exhibits a wider expression range in ovarian and colon adenocarcinoma than in their corresponding healthy tissues.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Function</b>                    | Inhibitor of DNA replication that promotes cell death in response to DNA damage . Acts as a guardian of the genome by killing cells with defective replication . Persistently blocks stressed replication forks by opening chromatin across replication initiation sites at stressed replication forks, possibly leading to unwind DNA ahead of the MCM helicase and block fork progression, ultimately leading to cell death . Acts independently of ATR . Also acts as an interferon (IFN)-induced antiviral protein which acts as an inhibitor of retrovirus protein synthesis . Specifically abrogates the production of retroviruses such as human immunodeficiency virus 1 (HIV-1) by acting as a specific inhibitor of the synthesis of retroviruses encoded proteins in a codon-usage-dependent manner . Binds to tRNAs and exploits the unique viral codon bias towards A/T |

nucleotides . The exact inhibition mechanism i

**Background**

Nucleus . Chromosome . Recruited to stressed replication forks carrying extended RPA filaments (PubMed:29395061). Recruited to DNA damage sites via interaction with RPA1 (PubMed:26658330, PubMed:29395061).

**matters needing attention**

Avoid repeated freezing and thawing!

**Usage suggestions**

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
