

eNOS (Phospho-Ser633) rabbit pAb

Catalog No	YP-Ab-10476
Isotype	IgG
Reactivity	Human; Mouse; Rat
Applications	WB
Gene Name	NOS3
Immunogen	Synthesized peptide derived from human eNOS (Phospho-Ser633)
Specificity	This antibody detects endogenous levels of eNOS (Phospho-Ser633) at Human, Mouse, Rat
Formulation	Liquid in PBS containing 50% glycerol, and 0.131% sodium azide.
Source	Polyclonal, Rabbit, IgG
Purification	The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen.
Dilution	WB 1:500-2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	NOS3/eNOS; NOS3; eNOS (Phospho-Ser633); Nitric oxide synthase; endothelial (EC 1.14.13.39) (Constitutive NOS) (cNOS) (EC-NOS) (Endothelial NOS) (eNOS) (NOS type III) (NOSIII)
Observed Band	
Calculated Molecular Weight	
Cell Pathway	Cell membrane. Membrane, caveola. Cytoplasm, cytoskeleton. Golgi apparatus. Specifically associates with actin cytoskeleton in the G2 phase of the cell cycle; which is favored by interaction with NOSIP and results in a reduced enzymatic activity.
Tissue Specificity	Platelets, placenta, liver and kidney.
Function	catalytic activity: L-arginine + n NADPH + n H ⁺ + m O ₂ = citrulline + nitric oxide + n NADP ⁺ . cofactor: Binds 1 FAD. cofactor: Binds 1 FMN. cofactor: Heme group. cofactor: Tetrahydrobiopterin (BH ₄). May stabilize the dimeric form of the enzyme. enzyme regulation: Stimulated by calcium/calmodulin. Inhibited by NOSIP and NOSTRIN. function: Produces nitric oxide (NO) which is implicated in vascular smooth muscle relaxation through a cGMP-mediated signal transduction pathway. NO mediates vascular endothelial growth factor (VEGF)-

induced angiogenesis in coronary vessels and promotes blood clotting through the activation of platelets.,online information:Nitric oxide synthase entry, polymorphism:Variation in NOS3 seem to be associated with susceptibility to coronary spasm.,similarity:Belongs to the NOS family.,similarity:Contains 1 FAD-binding FR-type domain.,similarity:Contains 1 flavodoxin-like

Background

Nitric oxide is a reactive free radical which acts as a biologic mediator in several processes, including neurotransmission and antimicrobial and antitumoral activities. Nitric oxide is synthesized from L-arginine by nitric oxide synthases. Variations in this gene are associated with susceptibility to coronary spasm. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, May 2009],

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
