Tissue Specificity	
Function	function:Seems to promote cellular resistance to TNF-induced apoptosis by inhibiting activation of the Raf-1/MEK/ERK pathway, JNK and phosphatidylethanolamine externalization.,similarity:Belongs to the phosphatidylethanolamine-binding protein family.,tissue specificity:Ubiquitously expressed. Highly expressed in tumor cells.,
Background	The phosphatidylethanolamine (PE)-binding proteins, including PEBP4, are an evolutionarily conserved family of proteins with pivotal biologic functions, such as lipid binding and inhibition of serine proteases (Wang et al., 2004 [PubMed 15302887]).[supplied by OMIM, Dec 2008],
