Function	caution: It is uncertain whether Met-1 or Met-3 is the initiator., function: Important for the resorption of phosphate by the kidney. May be involved in actively transporting phosphate into cells via Na(+) cotransport in the renal brush border membrane., similarity: Belongs to the major facilitator superfamily. Sodium/anion cotransporter family., subunit: Interacts with PDZK1., tissue specificity: Expressed in kidney cortex, liver and brain but not in other tissues.,
