

NFKB1 mouse mAb

Catalog No	YP-Ab-01109
Isotype	IgG
Reactivity	Human(predicted:Mouse; Rat)
Applications	WB
Gene Name	NF-κB1 p105/p50
Immunogen	Recombinant human NF-κB1 p105/p50 protein.
Specificity	This antibody detects endogenous levels of NF-κB1 p105/p50 and does not cross-react with related proteins.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse
Purification	The antibody was affinity-purified from mouse ascites by affinity-chromatography using epitope-specific immunogen.
Dilution	wb dilution 1:500
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	DKFZp686C01211;DNA binding factor KBF1;DNA binding factor KBF1 EBP1; DNA-binding factor KBF1;EBP 1;EBP-1;EBP1;KBF1;MGC54151;NF kappa B; NF kappaB;NF kappabeta;NF kB1;NFkappaB;NFKB 1;NFKB p105;NFKB p50; Nfkb1;NFKB1_HUMAN;Nuclear factor kappa B DNA binding subunit;Nuclear factor kappa-B;subunit 1;Nuclear factor NF kappa B p105 subunit;Nuclear factor NF kappa B p50 subunit;Nuclear factor NF-kappa-B p50 subunit;Nuclear factor of kappa light chain gene enhancer in B cells 1;Nuclear factor of kappa light polypeptide gene enhancer in B cells 1;Nuclear factor of kappa light polypeptide gene enhancer in B-cells 1;p105;p50;p84/NF-kappa-B1 p98;Transcription factor NFKB1;NF-κB1 p105/p50;p84/NF-kappa-B1 p98.
Calculated Molecular Weight	105kD
Cell Pathway	Nucleus. Cytoplasm. Nuclear, but also found in the cytoplasm in an inactive form complexed to an inhibitor (I-kappa-B).
Tissue Specificity	Muscle,Rectum tumor,Uterus,
Function	domain:Glycine-rich region (GRR) appears to be a critical element in the generation of p50.,domain:The C-terminus of p105 might be involved in cytoplasmic retention, inhibition of DNA-binding, and transcription activation., function:NF-kappa-B is a pleiotropic transcription factor which is present in

almost all cell types and is involved in many biological processes such as inflammation, immunity, differentiation, cell growth, tumorigenesis and apoptosis. NF-kappa-B is a homo- or heterodimeric complex formed by the Rel-like domain-containing proteins RELA/p65, RELB, NFKB1/p105, NFKB1/p50, REL and NFKB2/p52 and the heterodimeric p65-p50 complex appears to be most abundant one. The dimers bind at kappa-B sites in the DNA of their target genes and the individual dimers have distinct preferences for different kappa-B sites that they can bind with distinguishable affinity and specificity. Diff

Background

nuclear factor kappa B subunit 1(NFKB1) Homo sapiens This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and extra-cellular stimuli such as cytokines, oxidant-free radicals, ultraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimulates the expression of genes involved in a wide variety of biological functions. Inappropriate activation of NFKB has been associated with a number of inflammatory diseases while persistent inhibition of NFKB leads to inappropriate immune cell development or delayed cell growth. Alternative splicing results in multiple transcript variants encoding different isoforms

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.

Products Images

Western blot detection of NF-κB1 p105/p50 in K562, C6, 3T3 and HeLa cell lysates using NF-κB1 p105/p50 mouse mAb(dilution 1:500). Predicted band size: 120, 50kDa. Observed band size: 120, 50kDa.
