

CHP2 Polyclonal Antibody

Catalog No	YP-Ab-03098
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB;ELISA
Gene Name	CHP2
Immunogen	The antiserum was produced against synthesized peptide derived from human CHP2. AA range:101-150
Specificity	CHP2 Polyclonal Antibody detects endogenous levels of CHP2 protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Polyclonal, Rabbit,IgG
Purification	The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	Western Blot: 1/500 - 1/2000. ELISA: 1/40000. Not yet tested in other applications.
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	Calcineurin B homologous protein 2;HCA52;Hepatocellular carcinoma associated antigen 52;CHP2;HCA520;Hepatocellular carcinoma-associated antigen 520
Observed Band	22kD
Calculated Molecular Weight	22kD
Cell Pathway	Nucleus . Cytoplasm . Cell membrane . Predominantly localized in a juxtannuclear region. Colocalizes with SLC9A3 in the juxtannuclear region and at the plasma membrane (By similarity). Exported from the nucleus to the cytoplasm through a nuclear export signal (NES) pathway. May shuttle between nucleus and cytoplasm. .
Tissue Specificity	Expressed in malignantly transformed cells but not detected in normal tissues.
Function	function: Binds to and activates SLC9A1/NHE1 in a serum-independent manner, thus increasing pH and protecting cells from serum deprivation-induced death., similarity: Contains 4 EF-hand domains., subunit: Binds to SLC9A1/NHE1., tissue specificity: Expressed in malignantly transformed cells but not detected in normal tissues.,

Background

This gene product is a small calcium-binding protein that regulates cell pH by controlling plasma membrane-type Na⁺/H⁺ exchange activity. This protein shares sequence similarity with calcineurin B and can bind to and stimulate the protein phosphatase activity of calcineurin A (CnA) and functions in the calcineurin/NFAT (nuclear factor of activated T cells) signaling pathway. Another member of the CHP subfamily, Calcineurin B homologous protein 1, is located on Chromosome 15 and is an inhibitor of calcineurin activity and has a genetic phenotype associated with Parkinson's Disease (OMIM:606988). This gene was initially identified as a tumor-associated antigen and was previously referred to as Hepatocellular carcinoma-associated antigen 520. [provided by RefSeq, Jul 2013].

matters needing attention

Avoid repeated freezing and thawing!

Usage suggestions

This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
