

Pinch-1 Monoclonal Antibody

Catalog No	YP-Ab-03414
Isotype	IgG
Reactivity	Human
Applications	WB;IF;FCM;ELISA
Gene Name	LIMS1
Immunogen	Purified recombinant fragment of human Pinch-1 expressed in E. Coli.
Specificity	Pinch-1 Monoclonal Antibody detects endogenous levels of Pinch-1 protein.
Formulation	Ascitic fluid containing 0.03% sodium azide, 0.5% BSA, 50% glycerol.
Source	Monoclonal, Mouse
Purification	Affinity purification
Dilution	Western Blot: 1/500 - 1/2000. Immunofluorescence: 1/200 - 1/1000. Flow cytometry: 1/200 - 1/400. ELISA: 1/10000. Not yet tested in other applications.
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	PINCH;PINCH1;PINCH-1;LIMS1;LIM and senescent cell antigen-like-containing domain protein 1; Particularly interesting new Cys-His protein 1; Renal carcinoma antigen NY-REN-48
Observed Band	
Calculated Molecular Weight	
Cell Pathway	Cell junction, focal adhesion. Cell membrane; Peripheral membrane protein; Cytoplasmic side.
Tissue Specificity	Expressed in most tissues except in the brain.
Function	function: Effector of integrin and growth factor signaling, coupling surface receptors to downstream signaling molecules involved in the regulation of cell survival, cell proliferation and cell differentiation. Focal adhesion protein part of the complex ILK-PINCH. This complex is considered to be one of the convergence points of integrin- and growth factor-signaling pathway., similarity: Contains 5 LIM zinc-binding domains., subunit: Interacts (via LIM zinc-binding 5) with TGFB1I1 (By similarity). Interacts (via LIM zinc-binding 1) with ILK. Interacts with SH3/SH2 adapter NCK2., tissue specificity: In most tissues, except in the brain.,

**Background**

The protein encoded by this gene is an adaptor protein which contains five LIM domains, or double zinc fingers. The protein is likely involved in integrin signaling through its LIM domain-mediated interaction with integrin-linked kinase, found in focal adhesion plaques. It is also thought to act as a bridge linking integrin-linked kinase to NCK adaptor protein 2, which is involved in growth factor receptor kinase signaling pathways. Its localization to the periphery of spreading cells also suggests that this protein may play a role in integrin-mediated cell adhesion or spreading. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2010],
