ETAR Monoclonal Antibody

Catalog No	YP-mAb-13240
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB
Gene Name	EDNRA
Immunogen	The antiserum was produced against synthesized peptide derived from human EDNRA. AA range:378-427
Specificity	ETAR Monoclonal Antibody detects endogenous levels of ETAR protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-1:2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	ETAR;EDNRA;Endothelin-1 receptor;ETA;ETRA;Endothelin A receptor;ET-A;ETA-R;hET-AR
Observed Band	48kD
Calculated Molecular Weight	48kD
Cell Pathway	Cell membrane; Multi-pass membrane protein.
Tissue Specificity	Isoform 1, isoform 3 and isoform 4 are expressed in a variety of tissues, with highest levels in the aorta and cerebellum, followed by lung, atrium and cerebral cortex, lower levels in the placenta, kidney, adrenal gland, duodenum, colon, ventricle and liver but no expression in umbilical vein endothelial cells. Within the placenta, isoform 1, isoform 2, isoform 3 and isoform 4 are expressed in the villi and stem villi vessels.
Function	function:Receptor for endothelin-1. Mediates its action by association with G proteins that activate a phosphatidylinositol-calcium second messenger system. The rank order of binding affinities for ET-A is: ET1 > ET2 >> ET3., similarity:Belongs to the G-protein coupled receptor 1 family.,subunit:Interacts with HDAC7 and HTATIP.,tissue specificity:Isoform 1, isoform 3 and isoform 4 are expressed in a variety of tissues, with highest levels in the aorta and

	cerebellum, followed by lung, atrium and cerebral cortex, lower levels in the placenta, kidney, adrenal gland, duodenum, colon, ventricle and liver but no expression in umbilical vein endothelial cells. Within the placenta, isoform 1, isoform 2, isoform 3 and isoform 4 are expressed in the villi and stem villi vessels.,
Background	This gene encodes the receptor for endothelin-1, a peptide that plays a role in potent and long-lasting vasoconstriction. This receptor associates with guanine-nucleotide-binding (G) proteins, and this coupling activates a phosphatidylinositol-calcium second messenger system. Polymorphisms in this gene have been linked to migraine headache resistance. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009],
matters needing attention	Avoid repeated freezing and thawing!
Usage suggestions	This product can be used in immunological reaction related experiments. For more information, please consult technical personnel.
