

HoxA11/D11 Monoclonal Antibody

Catalog No	YP-mAb-15760
Isotype	IgG
Reactivity	Human;Mouse;Rat
Applications	WB
Gene Name	HOXA11/HOXD11
Immunogen	The antiserum was produced against synthesized peptide derived from human HOXA11/D11. AA range:216-265
Specificity	HoxA11/D11 Monoclonal Antibody detects endogenous levels of HoxA11/D11 protein.
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Source	Monoclonal, Mouse,IgG
Purification	The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen.
Dilution	WB 1:500-1:2000
Concentration	1 mg/ml
Purity	≥90%
Storage Stability	-20°C/1 year
Synonyms	HoxA11/D11;HOXA11/HOXD11;Homeobox protein Hox-A11/D11;HOXA11;HOX11;Homeobox protein Hox-A11;Homeobox protein Hox-11;HOXD11;HOX4F;Homeobox protein Hox-D11;Homeobox protein Hox-4F
Observed Band	28kD
Calculated Molecular Weight	28kD
Cell Pathway	Nucleus.
Tissue Specificity	Ovary,
Function	disease:Defects in HOXA11 are the cause of radioulnar synostosis with amegakaryocytic thrombocytopenia [MIM:605432]. The syndrome consists of an unusual association of bone marrow failure and skeletal defects. Patients have the same skeletal defects, the proximal fusion of the radius and ulna, resulting in extremely limited pronation and supination of the forearm. Some patients have also symptomatic thrombocytopenia, with bruising and bleeding problems since birth, necessitating correction by bone marrow or umbilical-cord stem-cell transplantation.,function:Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional

identities on the anterior-posterior axis.,similarity:Belongs to the Abd-B homeobox family.,similarity:Contains 1 homeobox DNA-binding domain.,

Background

In vertebrates, the genes encoding the class of transcription factors called homeobox genes are found in clusters named A, B, C, and D on four separate chromosomes. Expression of these proteins is spatially and temporally regulated during embryonic development. This gene is part of the A cluster on chromosome 7 and encodes a DNA-binding transcription factor which may regulate gene expression, morphogenesis, and differentiation. This gene is involved in the regulation of uterine development and is required for female fertility. Mutations in this gene can cause radio-ulnar synostosis with amegakaryocytic thrombocytopenia.
